

## Plastic Straw Flute Activity Guide

Build your own pan-flute out of upcycled materials using this guide.

### Supplies:

- 6 to 8 Plastic Straws (*We used 6 in our sample above!*)
- Tape
- Scissors

### How To:

- To make our pan flute, we'll be making a line of straws arranged from longest to shortest. In order to do that, we'll take two straws at a time and cut gradually increasing amounts. For the first two straws, cut only a bit off of the ends. Make sure they're equal.
- For the next two, double the amount you cut.
- Continue this method until you have 6-8 pairs of straws (12-16 pieces total) and arrange them from longest to shortest.
- Using a long piece of tape, place straws on the sticky side. Make sure to keep the matching pairs together.
- Secure well with more tape so that the straws do not move around.
- Enjoy making music!
